

BOSH 1-Day Workshop

Building a Pivotal Cloud Foundry Tile

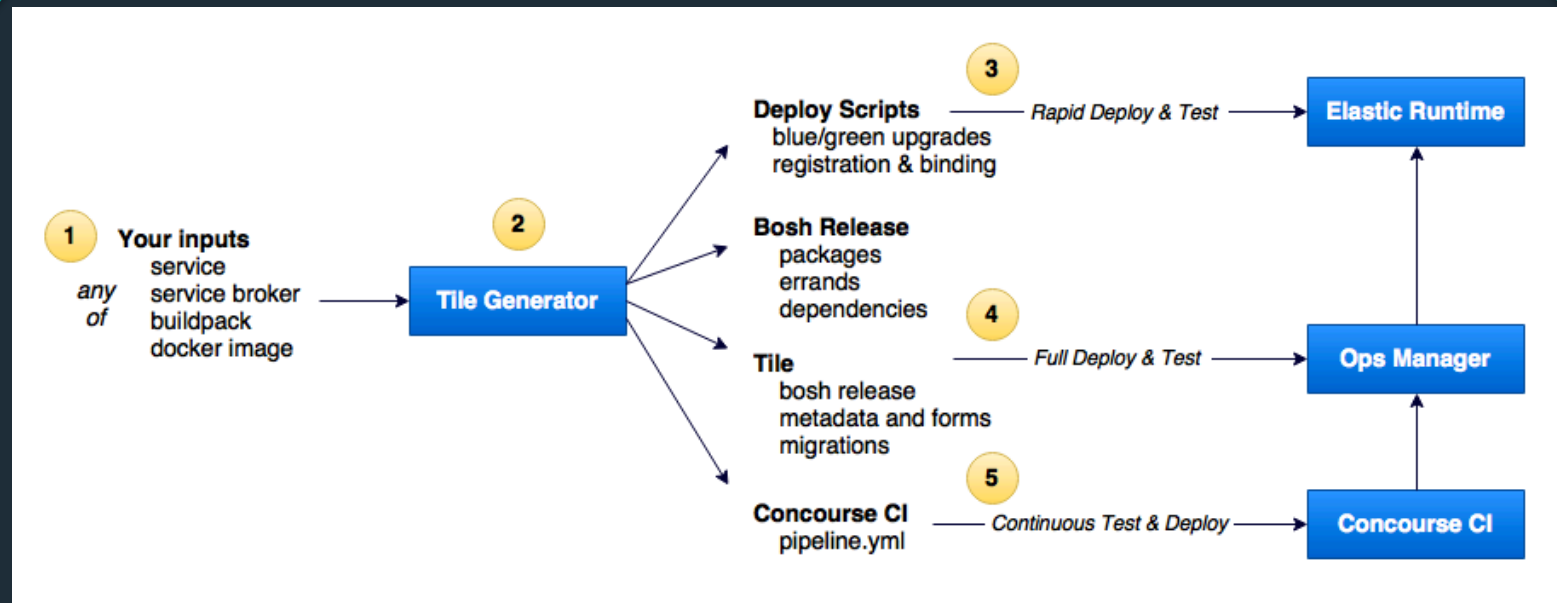

Goals

- Understand the difference between a Tile and a BOSH release
- Understand the basics of the Tile Generator
- Demonstration of Tile Generator

What's the difference between a Tile vs BOSH deployment?

- A BOSH deployment requires BOSH commandline access and handcrafting manifest files in order to deploy
- Tile is a package that gets imported into Pivotal Ops Manager and installed via a Web GUI
- Installing tiles via Ops Manager simplifies the install or upgrade process and does not need deep BOSH knowledge
- Tile install uses BOSH to deploy

PCF Tile Generator
